Why not see how many of these you can identify?

Oak tree – Identified by its irregular-shaped leaves and fruit (acorns). Oaks are deciduous and shed their leaves each autumn. New leaves appear in spring.

Seen

Oystercatcher – Seen along our coastline at any time of the year, these birds feed on shellfish, like mussels and cockles, and also fly inland to feed on worms.

Seen

Fallow deer – Shy creatures, with summer coats of reddish brown and white spots, and winter coats of dark grey with no spots. Males have palm-shaped antlers.

Seen

Jay – The most colourful member of the crow family, jays have shrill, screech-like calls. In autumn they bury nuts in preparation for colder winter months.

Seen

Primrose – Found in woodland clearings and hedgerows from March–May, this delicate wild flower gets its name from being the ‘first rose’ of the year.

Seen

Southern hawker dragonfly – One of the largest species in the UK, this insect lives near ponds and rivers but will fly some distance to hunt for prey.
